# SoftLayer Private Clouds

Deploy and scale your own private cloud at the push of the button. Introducing full cloud solutions with automated provisioning and configuration.

SoftLayer Private Clouds saves you the time of designing and setting up your own private cloud, and streamlines management through your private cloud's lifecycle.

We've automated and accelerated the deployment and configuration of everything your private cloud requires, having it ready in just a couple hours. So instead of building your own private cloud solution from scratch, you start with a whole cloud ready for whatever you want to do with it, with total access and control over every aspect.

## Full Management Control

Full access and management via web portal, full-featured API, and CloudStack management tools.

## On-Demand Scalability

Add physical nodes and virtual servers in real-time, with no downtime.

## Seamless Global Deployment

Place Private Cloud Zones in data centers around the world, controlled from a single pane of glass and centralized management server.

## RightScale Integration

Deploy and manage through the RightScale myCloud system to leverage RightScale ServerTemplates, RightScripts, and additional services.

## Object Storage Integration

Uses advanced SoftLayer Object Storage as a searchable repository for virtual machine images and other shared data resources.

Our automated system provisions and configures:

- **Management Server**  
Standardized configuration, deployed with Citrix CloudPlatform
- **SoftLayer Object Storage**  
Serves as central repository for templates, images, and other shared data
- **Private Cloud Zones**  
Create as many as you need in the same data center, or distributed geographically
- **Host Servers**  
Customize up to 10 per zone, deployed with Citrix XenServer and automatically registered with Management Server

SoftLayer Private Clouds are available with Citrix CloudPlatform as the cloud management solution. CloudPlatform's flexibility and ease of use provide the control, efficiency, and scalability that innovative private cloud solutions require.

And, as with all SoftLayer services, your private cloud can function as a stand-alone environment, or be fully integrated with your other SoftLayer solutions and services, including dedicated and cloud servers, database clusters, content delivery network, and more.

If you've been waiting for a cloud of your own, your wait is over. SoftLayer Private Clouds can have you in the sky today.
